- 18. The end

Financial institutions have always been under lots of bureaucracy, so the crypto market has emerged as a necessity and a simplification of the old payment systems. That's because the payment made directly between two parties no longer requires the contribution of a third party. Everything has grown, people have really felt the need for a change and that's how this world was born. The crypto market is on the rise, so people are becoming more and more curious about this and want to be a part. The crypto world is a slippery slope where you need to stay informed in order to succeed.

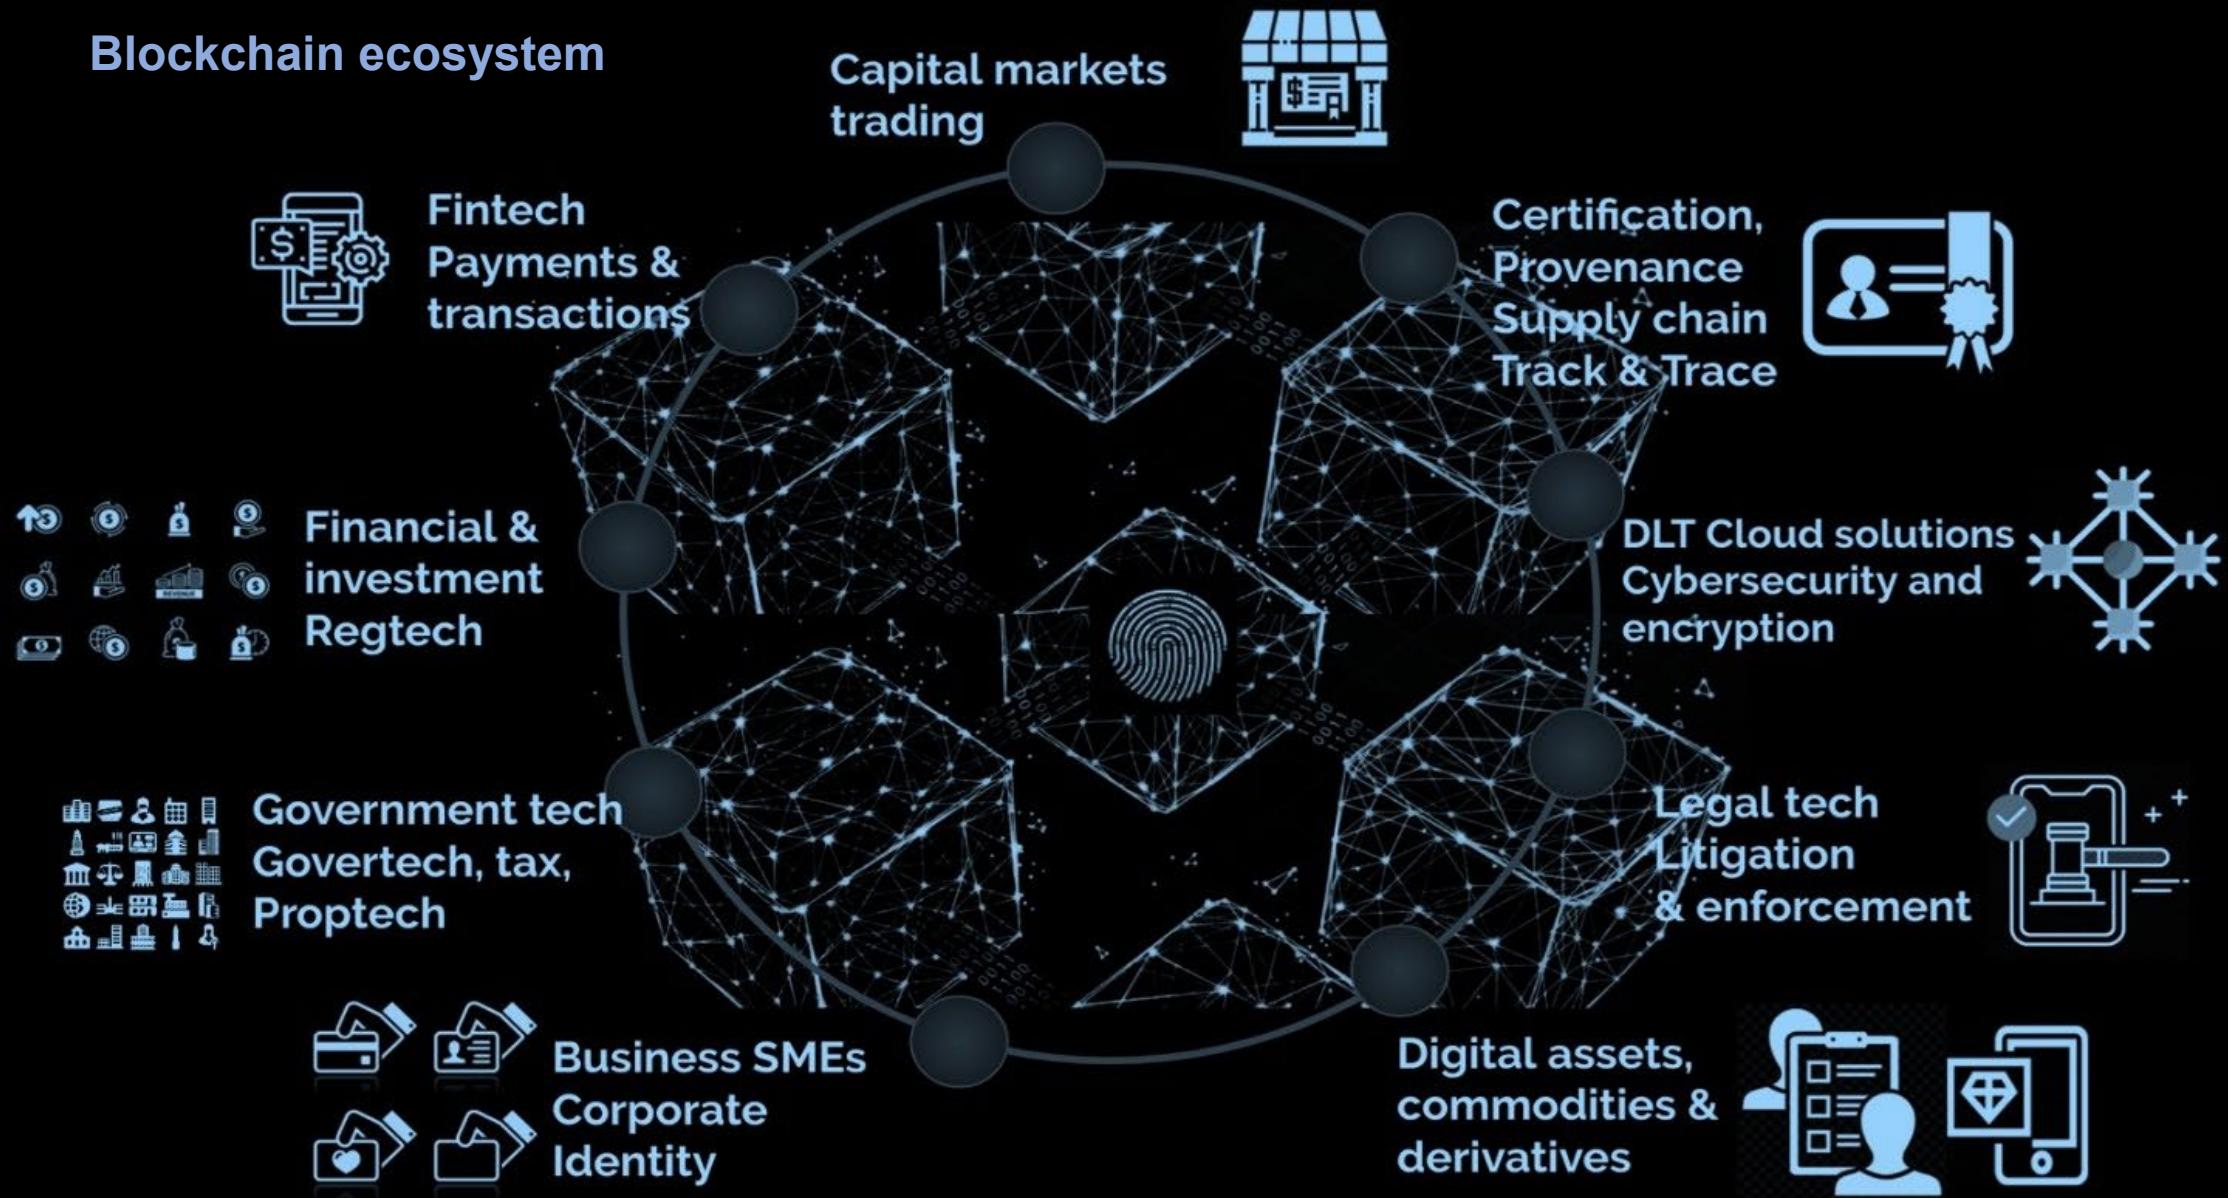

In the future, crypto will be the equivalent of the world money market. Our development will take us to where digitization will be a natural and perfectly normal thing. Crypto will no longer be just a currency, it will be a real ecosystem that will bring all the elements together in the same place: education, development and sustainability.

Blockchain ecosystem

A digital ecosystem is a group of interconnected information technology resources that can function as a unit. Digital ecosystems are made up of suppliers, customers, trading partners, applications, third-party data service providers and all respective technologies. Interoperability is the key to the ecosystem's success.

Our Genesis

We chose to create a coin precisely because we are tired of seeing people getting scammed. We set out to do this differently, to change things and to lay the foundation for a real long-term fortress. We want to build a strong community, to learn from each other, to talk openly about investments and to attack the subject at the root. We want equality and decentralized power, every member having the power to make a good decision for all of us.

First of all, unlike what already exists on the market, we want to form a strong and well-developed community. We want our evolution to be for the benefit of each member. Every new idea from you can be a new brick put in our foundation. We started from the beginning thinking that the HDR ecosystem is more than just a coin. We welcome you with several advantages.

If you invest in HDR, not only do you take part in the birth of a revolutionary concept but you can also:

- - receive the reward for your investment
- - have total transparency regarding the money invested
- - have the chance to develop yourself
- - become an owner of your token inside our incubator program.
- - grow inside this community.

EQUALITY MEANS BUSINESS

BUSINESS
FOR ALL

And last but not least, there is no risk of anyone taking over the monopoly on this platform because we promote the chance for equality. Therefore, each member can hold a maximum of 2,000,000,000 tokens.

We want to establish a safe and conducive environment for development and growth, we want to form a strong community. We would like to be as equal as possible, because we also invested in various projects that seemed promising. Having learnt from those we kept the good parts and we set out our new project to minimize risks and increase potential.

CRYPTOGRAPHY PROTECTION

\$HDR Contract is strongly locked.

The contract is locked for everyone including the owner, as you can see from audit we have no special powers over the investors or their money.

You can sleep well knowing all your money are protected by the contract and not by a human that can get greedy and leave with your money.

With all previous reward tokens, people thought that by increasing the amount you get from a transaction the reward will increase. This is false, because the rewards don't increase with how much you get from a transaction, it increases with the number of transaction. And this resulted in a fear of trade inside their token, so what we did is ...

REDUCE TAXES

And with this we resolved the problem by reducing the taxes as much as possible. We want to encourage the trades and make a profit from both the holding and the trading.

Tax distribution

The team came up with this tax distribution in order to encourage 2 ways to make money :

1. Active trading, because you only have 5.5% taxes that you can easily buy and sell to make a profit
2. Holding, where you will be rewarded with 3% of each transaction

HIGH

MEDIUM

LOW

PROFIT

Audit Reports

The problem we have spotted on BSC Audits is that the owner of a coin has to pay for the report, and what auditor would say that the person who is paying him it's a fraud. The moment he will say that he will be out of business.

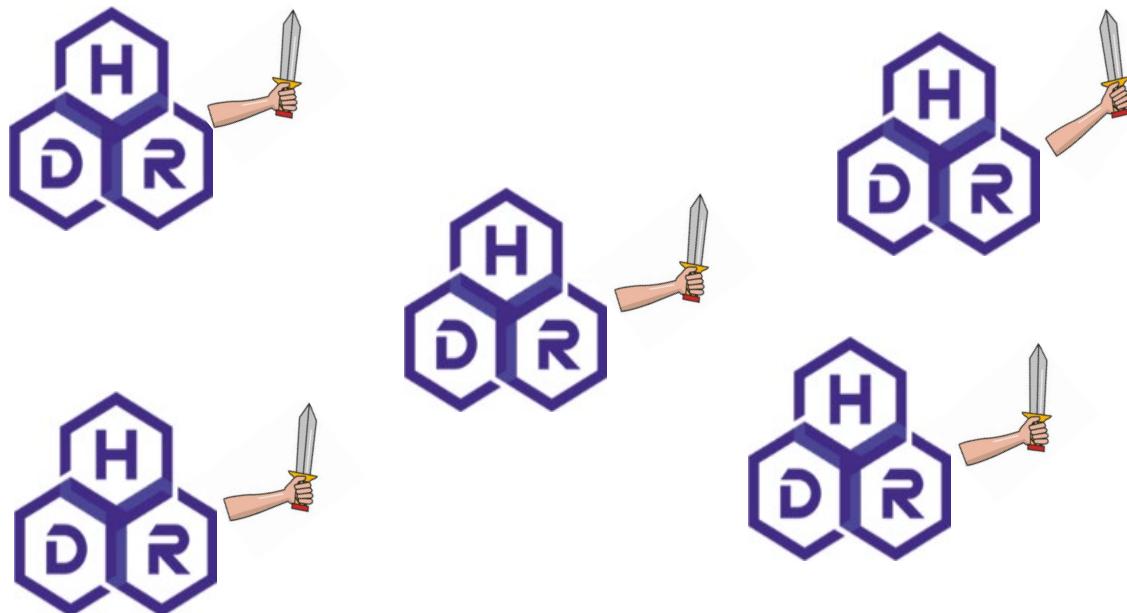

Furthermore, even when they say that, the owner can simply go to the next auditor that he can pay and say it's perfectly safe.

Hire a Developer for Review

HDR is a solution for the problem with audit reports. Since we are supported by the community, we try our best to protect the investors and not the coin owners.

For a small amount of money you can ask us to make a full manually report, both on code and on business plan, and in a given amount of time we will come back with all the red flags we found.

HDR Hedge Fund

In the pursuit of bringing real world solutions to the blockchain, many companies tried to create something similar inside a contract. However, they failed because they strayed away from the classic concept.

- ! They lacked transparency
- ! They lacked decentralization.
- ! And most importantly, they lacked the core, to chose from fund managers that better suite your needs.
- ! And in a crypto world, where everything is happening with lightning speed, they lack the ability to take near instant action.

Our vision over the hedge fund

We see this hedge fund as a platform where you can become a fund manager or a investor.

As a fund manager

- You will have to pass a KYC
- Perform a background check and present your portfolio to a board
- Make a small presentation in order to attract the investors and convince them why should they trust you to manage their funds.
- Manage the investments and decide where and when to invest in order to maximize your profits and your investors.
- Decide what part of the profit goes to you and what part goes to investors.

As a investor

- You will have the ability to chose your fund manager based on his reviews and his trading history
- Have the possibility to invest in many fund managers and maximize your profit
- Ask the manager for strategy and how he will guarantee that you don't lose money inside his fund
- Rate your fund manager based on his performance.

What is HDR Incubator?

We see the incubator same as a Silicone valley incubator, where you as an owner come with and idea from your field of expertise, and we dedicate all our time to make your dream come true.

You may be an artist and want to create a NFT platform, where you can sell your creations and make a profit

You can be a game developer and want to create a Metaverse,

Or you simply like gambling and want to create a casino platform where you can play.

The possibilities are endless, you think of it and we will find a solution to make it a reality.

HDR Incubator

We discuss your idea
Create a support group for your idea

Gather the funds to develop the idea
Model it to the perfection

Begin to develop the project

Market the hell out of it

Pass the ownership and let your idea fly

To be continued ...

Those were our ideas for this token, starting from here the imagination is the limit. With the community behind us, we can make the impossible become a reality.

The Sky is not the Limit
It's just the Beginning
